The sequence has been isolated as a cDNA clone from a ripening-related cDNA library derived from climacteric melon fruit, using the tomato phytoene-synthase cDNA (TOM5) as a heterologous probe. The MEL5 gene 5'-end has also been isolated by polymerase chain reaction and sequenced. The DNA may be used in sense or antisense constructs to modify gene expression in plants. The carotenoid content and related characteristics of plant parts (particularly fruit) may be modified in this way.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Grierson C;

                                                                                         Clone pTOM5 was derived from a cDNA library isolated from ripe tomato RNA (Slater et al., Plant Molecular Biology 5, 137-147, 1985). The protein it encodes is estimated to have mol. wt. ca. 48kD. pTOM5 is expressed in ripening fruit. Strongest expressic at the full orange stage of ripening; no expression is detected green fruit. See also AAQ12494. (Updated on 25-MAR-2003 to correct PA field.)

The phytoene synthetase coding sequence represents a cDNA of the invention. The isolated nucleic acid molecules are used for producing recombinant polypeptides or transgenic plants with enhanced ability to synthesise carotenoids. Phytoene has been used as a ultra violet absorber and other carotenoids have been used as food colours, animal feeds and in the pharmaceutical and cosmetics industries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 1998-086196/08.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes a phytoene synthase polypeptide, which is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels. Gibberellic acid levels may be inhibited or controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthetic pathway sequence, diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copally diphosphate synthase, Jbeta-hydroxylase, 2-oxidase, phytoene synthase, C-20 oxidase, and a 2beta, Jbeta-hydroxylase polymucleotides to achieve this. The method is used to control seed germination and seedling growth especially to regulate gene products of gibberellin biosynthetic pathway and restoration of normal seed germination, in transgenic plants. The plants produced are gibberellin deficient, and have sbortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Obtaining transgenic plant useful for controlling seedling growth comprises transgene comprising a saltered levels of an essential hormone -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  compared to normal plants.

The method involves producing transgenic plants having a phenotype of reduced seed germination and reduced early seedling growth, then crestoring seed germination and reduced early seedling growth, then crestoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in agricultural production so that unfavorable environmental conditions normally reducing agronomic output can be avoided and conditions normally reducing agronomic output can be avoided and condition, emergence and seedling vigor, so increasing yields at Condition, emergence and seedling vigor, so increasing yields at Condition, emergence and seedling vigor, so increasing yields at Condition, soybean, cotton, etc., and is also useful in storage and containsport of seeds to reduce premature germination which may affect agronomic or food quality of the seeds. The present sequence is condition bytoene synthase CDNA, This CDNA is used in exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

It was isolated from a cDNA library prepared from mRNA extracted from the petals of Gentiana lutea. The nucleic acid sequence was amplified from the library using PCR primers AAV16552-53. The phytoene synthase gene is useful for breeding plants with variable flower colours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2868 BP;

                                          The present sequence encodes phytoene synthase 2. It was isolated from a cDNA library prepared from mRNA extracted from the petals of Gentian lutea. The nucleic acid sequence was amplified from the library using PCR primers AAVI6952-53. The phytoene synthase gene is useful for breeding plants with variable flower colours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           06-JUL-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAV16949;

                                                                                                                                                                                                                                                                                                                    The present sequence encodes phytoene synthase 1. It was isolated from a CDNA library prepared from mRNA extracted from the petals of Gentiau lutea. The nucleic acid sequence was amplified from the library using PCR primers AAVI6952-53. The phytoene synthase gene is useful for breeding plants with variable flower colours.

It was isolated from a cDNA library prepared from mRNA extracted from the petals of Gentiana lutea. The nucleic acid sequence was amplified from the library using PCR primers AAV16952-53. The phytoene synthase gene is useful for breeding plants with variable flower colours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Phytoene synthase gene - flower colour
